

Plant List Explanation

Four Hydrozones (based on supplemental irrigation provided)

1. High Water need: uses 18-20 gals./ S.F./season
2. Moderate Water need: uses 10 gals./S.F./season
3. Low Water need: 3 gals./S.F./season
4. Very Low Water need: 0 gals./S.F./season

Information:					
Approved cultivars or varieties are listed in the "selected cultivars" column. The term species indicated that plants grown from seed as well as the listed cultivars may be used.					
Those species labeled as drought tolerant should be the only species used on sites with limited irrigation.					
Only ornamental trees that have these characteristics should be selected as street trees:					
1. Can readily be trained to a single stem with the first branch at 4-5 feet.					
2. Sterile, sparsely fruited, small fruited or with persistent fruit.					
3. Upright growth form versus broad spreading.					
4. Disease resistant.					
5. Drought tolerant.					
Contact the City Forester for approval or ornamental tree and shade trees not listed.
